

"2016 has been an important year"

Alessandro Manes, Managing Director, Aleph Srl, shares the advantages its solutions provide in the digital printing market, its future plans and prospects

Can you briefly explain your activity ?

Established in 1999 in Como, in the heart of Italy's textiles district, Aleph is a company that boasts solid know-how in the construction of printing machines and the development of supporting software. From large format textiles printers to drying systems, from proprietary software to consumables, Aleph develops and produces technologically advanced products for all printing processes and offers reliable post-sales technical support.

Skills and experience acquired over the years allow Aleph to achieve high standards of quality at all stages in the printing process, from performance-related aspects to environmental sustainability.

What kind of solutions will you present at FESPA Eurasia 2016 in Istanbul ?

After several installations in Europe, we are ready to present the evolution of the LaForte® project, which consists in an integrated solution including a wide range of outstanding large format inkjet digital printers, softwares and accessories. The whole category will be represented at our booth (H 30) by the high performing LaForte® Paper, developed for digital printing on transfer paper by our engineers, with a very high production capacity that can reach a speed of 600sqm / hr.

What kind of advantages do these solutions provide in digital printing market ?

The advantages of the LaForte® plotters are unique: the automatic further improved heads alignment, the new software matrices for the points arrangement and above all, the innovative PATENTED transport system through vacuum belt filter guarantee an

“ We have designed this printer with the Indian customers in mind and we hope to improve our distribution all over the country, thanks to our local partners. ”

exceptional performance compared to competitors printers.

You have also designed a new digital plotter called LaForte STUDIO which will be introduced in the Indian market ?

The LaForte® STUDIO range is entering the LaForte® integrated solution at the time of Fespa and it is designed for medium production, based on the successful LaForte® technology to guarantee quality at all stages in printing process. We have designed this printer with the Indian customers in mind and we hope to improve our distribution all over the country, thanks to our local partners.

Which are the key elements of the LaForte STUDIO range ?

The LaForte STUDIO achieves a 1200 dpi resolution for a perfect printing quality.

Performing a top speed of 360 sqm/h it is equipped with an innovative control software for variable drop management to accentuate the crisp, authentic effect, totally avoiding the dithering effect. The new software matrix designed for the arrangement of the points are the elements that guarantee an exceptional

performance compared to competitors. Furthermore, the LaForte® STUDIO range is also equipped with the patented transport system that characterizes all the LaForte printers.

What do you foresee for the near future and your activity ?

2016 has been an important year for our brand and our business, marked by the launch and improvement of the LaForte® integrated solution. Our Company is in a period of great expansion and growth and we are starting new important collaborations.

How will attending to FESPA Eurasia contribute to your goals ?

Aleph is working very hard to spread its products in Europe and outside European borders, by learning each market specifics and delivering high performing solutions and technology. Fespa will contribute significantly in improving our international expansion. We will soon announce other participations to important exhibitions where our business is establishing.
