

New graphic pigment inks for Aleph LaForte

24 SEPTEMBER 2018

SHARE THIS

Aleph will use SGIA Expo and Viscom Milan to show its LaForte printing technology. The focus will be on the large-format sublimation printer, the LaForte 200, with a print light of up to 340cm, and on the LaForte 400 Blue Back for the signage world with new graphic pigment inks.

The printers - which use a rotary belt with air vacuum system – can be used for an array of media, such as transfer papers, blue back and melamine, and have a top print speed of 900m²/hr. It is possible to increase the number of printheads and modify the software and the mechanical elements on the basis of production needs.
